To Whom It May Concern,

I am writing to express my strong interest in this Data Analyst position. I have two technical master's degrees in Data Science and Mathematics, along with professional experience in quantitative analysis surrounding various healthcare datasets that I feel would be invaluable to your team. I have one year of experience in a data analysis start-up, working with a variety of government-issued datasets predominately in the healthcare sector, though I have experience with a variety of private datasets obtained from confiding companies, as well as other datasets in the field from my time in university.

During my year at Soria Analytics, I worked very closely with Medicare and Medicaid program/plan datasets, though we frequently worked with public health datasets and other privately distributed forms. My typical day involved developing data pipelines using Python from online data sources such as the CDC and CMS that feed into our analysis tool such that they automatically update analyses I structured when new data is uploaded. I have a strong understanding of the underlying structure of these various types of datasets, how best to clean them and optimize them for analysis. I am proficient in Python and its data science libraries, as well as SQL and R, utilizing these languages to analyze and visualize data to find patterns and insights.

In addition to my technical skills, I am a quick learner and a team player. Working in a small team environment has taught me how to be more effective in communication and collaboration, solve problems that I normally wouldn't have come across in my field of study, and adapt to quick shifts in direction and priorities within an ever-advancing technology landscape. These lessons have made me a more well-rounded and effective analyst that I feel propel me above other candidates for this position.

I believe that my Master's degrees and one year of experience in a healthcare data analysis start-up puts me in a great position to excel in this role. If you have any questions or would like to discuss my application further, please feel free to contact me.
