SUMMARY

Data analyst with graduate degrees in Data Science and Mathematics and a year of building healthcare reporting and data pipelines at Soria Analytics. I like building tools that take repetitive work off people's plates, and I am motivated by complex problems that I can utilize my education and intuition to solve. Currently consulting independently on analytics and AI projects.

TECHNICAL SKILLS

- **Languages:** Python (Pandas, Scikit-Learn, PyTorch), SQL, R, Excel, LaTeX
- **Tools:** Sigma Computing, Databricks, Power BI, Git/GitHub, Jupyter, Web Scraping, Pivot Tables, XLOOKUP, Agentic LLMs (Claude Code, MCP servers)
- **Modeling & Statistics:** Regression (Multivariate, Logistic, Time Series), Gradient Descent, Feature Engineering, ANOVA, Monte Carlo Simulation, Bayesian Inference, Non-parametric Tests, Topological Data Analysis
- **Healthcare:** Claims, Readmissions, Length of Stay, Utilization, Fee-for-Service, Medicaid/Medicare/Commercial Plans, EMR/EHR, Medical Loss Ratio (MLR), CMS Star Ratings

PROFESSIONAL EXPERIENCE

Independent Contractor *Data & Analytics Consultant*
June 2026 – Present *Troy, NY*

- **Pharmaceutical Accounting:** Built a Python script and Excel workbook that classify and total drug dosage records for a local hospital's pharmacy department, driven by reference tables and XLOOKUP so staff can add new drugs without code changes.
- **Elder Owl:** Lead QA for an AI assistant that routes each task to the LLM best suited to its reasoning depth and context size; reproduce, document, and triage bugs against the staging environment.
- **Changelog Systems:** Performed quality assurance and bug reporting on a multi-tenant changelog application, with commit access to publish fixes directly to the repository.

Soria Analytics *Data Analyst*
June 2025 – May 2026 *Remote*

- Built and maintained the reporting layer for government- and private-equity-sourced healthcare datasets in Sigma, designing or refining 60+ client-facing dashboards that compiled to SQL against a Postgres data warehouse.
- Built end-to-end ingestion pipelines in Python, spanning EMR, EHR, and public health sources, handling acquisition, cleaning, and analysis of MLR, enrollment, and year-over-year deltas for payers and providers in the sector.

SORIA PROJECTS

CMS Star Ratings (Python) *Fall 2025 – Winter 2025*

- Developed a script that reconciles the annual CMS Star Ratings tables for Medicare contracts, attributing each year-over-year rating change to the measures driving it and rolling contracts up by enrollment weight to anticipate moves in NYSE-listed payers; rating shifts tracked with 5–10% swings in market value, and up to 25% on major shifts.

Hospital Cost Report (Sigma Dashboard) *Winter 2025 – Spring 2026*

- Created an interactive dashboard for the annual CMS Hospital Provider Cost Report, breaking down national and provider-level revenue, costs, margins, occupancy, and discharges in a single dynamic view.
- Automated the refresh pipeline: an RSS monitor detects new releases, a scraper downloads them, schema checks flag format changes, and validated data loads straight into the dashboard, replacing hours of manual monitoring.

CDC Influenza-like Illness Hospital Occupancy (Sigma Dashboard) *Fall 2025*

- Designed a dashboard tracking hospital inpatient and ICU occupancy by patients with influenza-like illness (ILI), with season-to-season comparison over adjustable timeframes and optional breakdowns by age group and region (Census and HHS), backed by an end-to-end pipeline that refreshes the dashboard on each CDC release.

SEC Filing Extraction (Python) *Winter 2025 – Spring 2026*

- Created a batch pipeline that locates SEC filings by ticker, quarter, and year, retrieves them, and extracts financial table data into typed schemas that retain the source page for every value.

EDUCATION

University at Albany Albany, NY
Master of Science in Data Science, Master of Arts in Mathematics *Fall 2023 – Spring 2025*
Thesis: Four-Part Lecture Series on the Riemann Hypothesis

- Designed and delivered a four-part lecture series to graduate students and faculty, pacing each session so attendees outside the specialty could follow the material, and fielding questions from audience members at every level of experience.

Rensselaer Polytechnic Institute (RPI) Troy, NY
Bachelor of Science in Applied Mathematics *Fall 2016 – Fall 2020*
