TECHNICAL SKILLS

- **Healthcare-Specific Analysis:** Claims, Readmissions, Length of Stay, Utilization, Costs, Fee-for-Service, Insurance Plans (Medicaid, Medicare, Private), EMR/EHR, Medical Loss Ratio (MLR), CMS Star Ratings
- **Languages & Tools:** Python (Pandas, Scikit-Learn, PyTorch), SQL, R, Excel, Jupyter, Git/GitHub, Sigma Computing, L^AT_EX
- **Data Analysis:** EDA, ETL, KPIs, Trend Analysis, Variance Analysis, Validation, Visualization, Statistics (Bayesian, Inferential and Nonparametric)
- **Modeling:** Regression (Multivariate, Logistic, Time Series), Random Forest, Feature Engineering, Principal Component Analysis (PCA), Monte Carlo Simulations, Topological Data Analysis (TDA)

PROFESSIONAL EXPERIENCE

Independent Contractor

Data & Analytics Consultant

June 2026 – Present

Troy, NY

- **Premo Cloud:** Part-time contributor to a production financial reporting application, working in an existing team codebase on the layer that maps imported accounting records into internal reporting categories, implementing and testing changes before handoff. Client and product detail withheld under NDA.
- **Rose Project:** Built a Python program to classify and total drug dosage records for a healthcare client, then wrote a guide for reproducing the same analysis in Excel and supplied a sample workbook as a proof of concept, letting the client rerun and extend the work without writing code.

Soria Analytics

Data Analyst

June 2025 – May 2026

Remote

- Built and maintained the reporting layer for government- and private-equity-sourced healthcare datasets in Sigma, designing or refining 60+ client-facing dashboards that compiled to SQL against a Postgres data warehouse.
- Built end-to-end ingestion pipelines in Python, spanning EMR, EHR, and public health sources, handling acquisition, cleaning, and analysis of MLR, enrollment, and year-over-year deltas for payers and providers in the sector.
- Onboarded and trained new analysts on internal systems and data best practices.

SELECTED PROJECTS

Star Ratings (Soria Analytics Script, Python)

Fall 2025 – Winter 2025

- Developed a script that reconciles the raw CMS Star Ratings tables by plan and contract year.
- Attributed each year-over-year rating change to the specific measures driving it, then rolled plan-level results into enrollment-weighted averages by NYSE-listed parent company; ratings set Medicare Advantage quality bonus payments and rebate percentages on a two-year lag, making the output a forward indicator of bonus and rebate revenue.

Hospital Cost Report (Soria Analytics Dashboard, Sigma)

Winter 2025 – Spring 2026

- Created an interactive dashboard for the annual CMS Hospital Provider Cost Report dataset, breaking down national and provider-specific metrics (Revenue, Costs, Margins, Occupancy and Discharges).
- Set up a pipeline including a web crawler to automatically detect RSS feed updates for data, a scraper for automatic download, schema detection protocols to find deviations in formatting, and a system to incorporate the newly uploaded data directly into the dashboard.

CDC Weekly Hospital Inpatient/ICU Occupancy (Soria Analytics Dashboard, Sigma)

Fall 2025

- Designed a dashboard tracking Influenza-like Illness over time, supporting season-to-season comparison across variable timeframes with optional breakdowns by age group and by region (Census and HHS).
- Built and maintained a full end-to-end data pipeline so the dashboard updates when new data is released.

SEC Filing Extraction (Soria Analytics Script, Python)

Winter 2025 – Spring 2026

- Cocreated a batch pipeline that locates SEC filings by ticker, quarter, and year, retrieves them, and extracts financial table data into typed schemas that retain the source page for every value.
- Chunked documents along detected section boundaries so financial tables are never split across requests, processed filings concurrently, and tied extracted values back to the source filings before downstream use.

- Biomechanics Topological Data Analysis (Data Science Thesis)

Spring 2025
- Analyzed movement patterns in sports video to distinguish optimal from suboptimal form, transforming video into grayscale pixel data to perform Persistent Homology in Python.
 - Delivered a technical report and presentation translating the topological findings for a non-specialist audience.

- Four-Part Lecture Series on the Riemann Hypothesis (Mathematics Thesis)

Spring 2024
- Designed and delivered a four-part lecture series to an audience of graduate students and faculty, pacing each session so attendees outside the specialty could follow the full argument.
 - Condensed a dense body of research on analytic continuation into presentation material and fielded questions live from an audience that included subject-matter experts.

EDUCATION

- University at Albany

Albany, NY

Master of Science in Data Science

Fall 2023 – Spring 2025

Master of Arts in Mathematics

Fall 2022 – Fall 2024
- Rensselaer Polytechnic Institute (RPI)

Troy, NY

Bachelor of Science in Applied Mathematics

Fall 2016 – Fall 2020

ADDITIONAL EXPERIENCE

- K&R Premo Enterprises

Farm Hand (Part-Time)

October 2019 – Present

Troy, NY
- Share responsibility for daily husbandry of the family cattle herd and poultry, including feeding, watering, and health monitoring year-round.
 - Build and repair pasture fencing and coops, operate equipment including a rented wood processor, and resolve animal health and property issues independently.
- Adirondack Hotel

Bartender

June 2020 – December 2020

Long Lake, NY
- Ran weekend bar service in a high-volume hotel restaurant, working peak dinner rushes and staffing bar operations for wedding receptions and private events.

VOLUNTEER EXPERIENCE

- Kitten’s Angels

Shelter Volunteer
- Maintain kennel sanitation and daily food and water for shelter cats awaiting adoption, supporting the intake capacity of a volunteer-run rescue.
